

SYNTHIA™ Lite stop screening. start synthesizing.

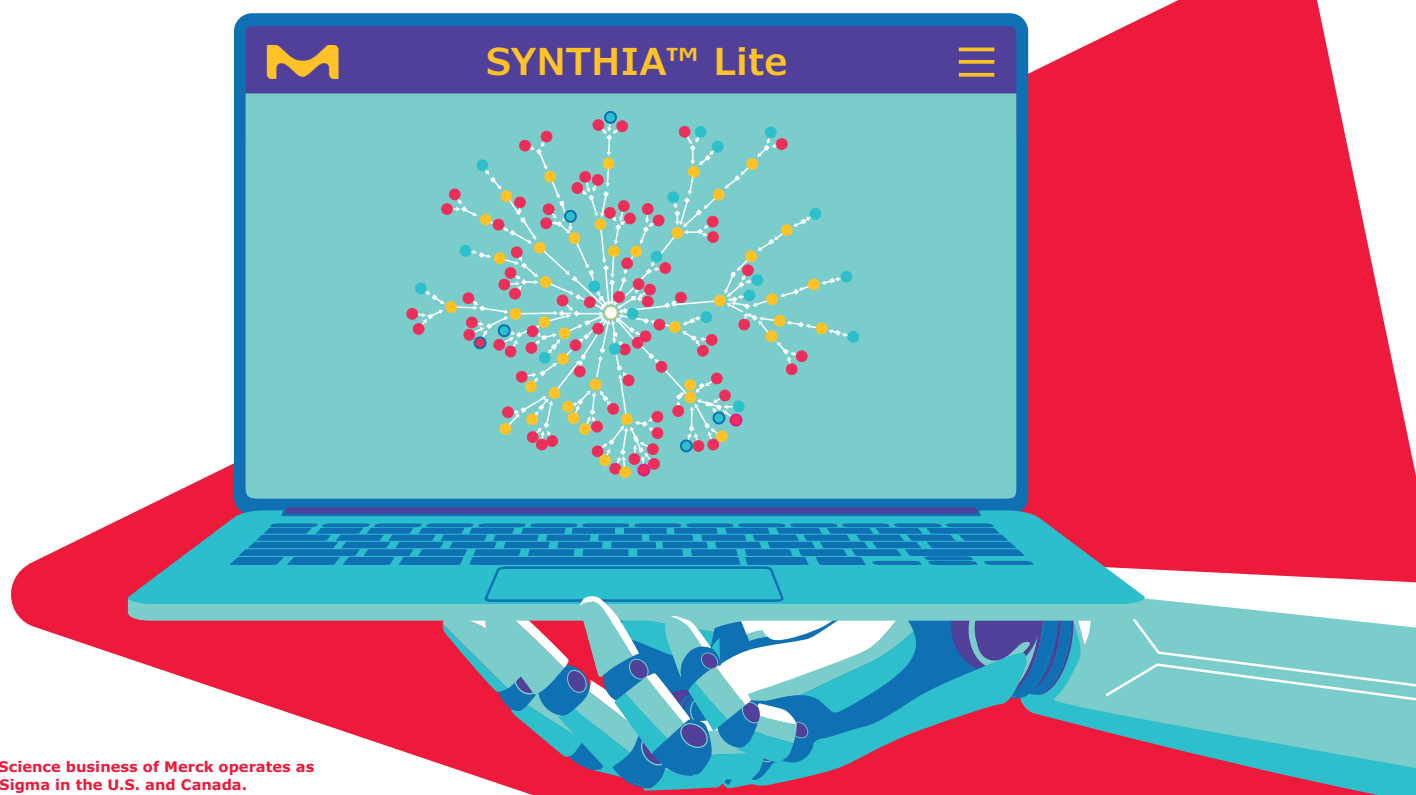

Experience our powerful SYNTHIA™ retrosynthesis software with a free individual trial

Go from imagining what's possible to testing what's probable today

In laboratory validation, SYNTHIA™ Lite retrosynthesis software found robust and reliable pathways that reduce synthetic steps, increase yields, and decrease costs for both known and novel targets.

Benefits of SYNTHIA™ Lite

- Cloud-Based Application
- 30 Day Free Trial for up to 5 Target Molecules
- Individual license of SYNTHIA™ with the power of SYNTHIA™ Enterprise
- Easy Upgrade to the Enterprise version of SYNTHIA™ retrosynthesis software

NEW FEATURES

Expanded Reaction Databases

- Improved machine-extracted rules databases
- Additional published reactions databases

Enhanced Results Path View

- New Building Block View with disconnection schemes of target molecule and list of starting materials
- New Pathway View with full reaction scheme, reaction names and typical reaction conditions

The screenshot shows the pricing options for SYNTHIA Lite Retrosynthesis Software. It is divided into three columns: Free Limited Trial, Premium Options, and Enterprise License. The Free Limited Trial offers a 1-month trial with up to 5 unique target molecules. Premium Options are available for \$2,000, offering 10 target molecules for 3 months or 50 target molecules unlimited. The Enterprise License includes site licensing, collaboration tools, batch analysis, and single sign-on.

The screenshot shows the 'New Analysis' screen with two main options: 'Automatic Retrosynthesis' and 'Automatic Batch Retrosynthesis'. Both options describe planning full synthetic pathways back to commercially available and known starting materials. The interface includes tabs for 'ANALYSIS TYPE' and 'TARGET'.

The screenshot shows the drawing interface for a target molecule. The target molecule is a cyclohexane ring with a methyl group, a hydroxyl group, and a propyl group. The interface includes a 'DRAW' tool, a table with columns for NAME, SMILES, and CAS, and a 'Start Analysis' button. The SMILES string shown is CCCC(O)C1CCCCC1C.

The screenshot shows the 'Building Blocks' view for a target molecule. It displays the target molecule and three building blocks: a cyclohexane ring with a methyl group, a cyclohexane ring with a methyl group, and a cyclohexane ring with a methyl group. The building blocks are priced at \$30.80 and \$0.34.

Experience how SYNTHIA™ Lite retrosynthesis software can enhance your expertise to quickly go from imagining what's possible to testing what's probable. Are you ready to join the retrosynthesis revolution?

Start synthesizing. Today.
